Python for Excel Nov 16 2022 While Excel remains ubiquitous in the business world, recent Microsoft feedback forums are full of requests to include Python as an Excel scripting language. In fact, it's the top feature requested. What makes this combination so compelling? In this hands-on guide, Felix Zumstein--creator of xlwings, a popular open source package for automating Excel with Python--shows experienced Excel users how to integrate these two worlds efficiently. Excel has added quite a few new capabilities over the past couple of years, but its automation language, VBA, stopped evolving a long time ago. Many Excel power users have already adopted Python for daily automation tasks. This guide gets you started. Use Python without extensive programming knowledge Get started with modern tools, including Jupyter notebooks and Visual Studio code Use pandas to acquire, clean, and analyze data and replace typical Excel calculations Automate tedious tasks like consolidation of Excel workbooks and production of Excel reports Use xlwings to build interactive Excel tools that use Python as a calculation engine Connect Excel to databases and CSV files and fetch data from the internet using Python code Use Python as a single tool to replace VBA, Power Query, and Power Pivot

Understanding Your Users Apr 09 2022 "Understanding Your Users is an easy to read, easy to implement, how-to guide on usability in the real world. It focuses on the "user requirements gathering" stage of product development and it provides a variety of techniques, many of which may be new to usability professionals. For each technique, readers will learn how to prepare for and conduct the activity, as well as analyze and present the data - all in a practical and hands-on way. The techniques can be used together to form a complete picture of the users' requirements or they can be used separately to address specific product questions. These methods have helped product teams understand the value of user requirements gathering by providing insight into how users work and what they need to be successful at their tasks."--BOOK JACKET.

New Challenges of Chinese Copyright Law in the Digital Age Dec 05 2021 This very useful book compares the legislation and case law of Chinese copyright law with those of the United States and European countries, focusing on three subjects - the liability of Internet Service Providers, the 'fair use' versus 'fair dealing'

copyright doctrine, and the copyrightability of live sports telecasts - all of which are unsettled questions of law under the existing copyright regime. Among the important aspects covered are the following: secondary liability theories worldwide, including contributory liability, vicarious liability, inducement liability and joint liability; legislative and technology responses to online piracy: “graduated response” program and fingerprint filtering technology; pros and cons of the fair-use doctrine v. fair-dealing doctrine; different outcomes of the Google litigation worldwide; copyrightability of sports telecasts; China’s strategy in combating online piracy of live sports telecasts during the 2008 Beijing Summer Olympic Games.

Proceedings of the 2022 International Conference on Educational Innovation and Multimedia Technology (EIMT 2022) Nov 23 2020 This is an open access book. As a leading role in the global megatrend of scientific innovation, China has been creating a more and more open environment for scientific innovation, increasing the depth and breadth of academic cooperation, and building a community of innovation that benefits all. These endeavors have made new contribution to globalization and creating a community of shared future. 2022 International Conference on Educational Innovation and Multimedia Technology (EIMT 2022) was held on March 25-27, 2022 in Hangzhou, China (Due to the epidemic, the meeting was moved to online). The aim of the conference is to bring together innovative academics and industrial experts in the field of Educational Innovation and Multimedia Technology to a common forum. The primary goal of the conference is to promote research and developmental activities in the related field.

Forced Labor in China Aug 21 2020 Hearings about the continued production of

goods by forced labor in prisons and in the Laogai, the so-called reform-through-labor camps, maintained by the Government of China. Chinese labor camps house countless prisoners of conscience, political dissidents, and religious believers. Camp inmates are subjected to brainwashing, torture and forced labor. Witnesses include Harry Wu, Laogai Research Foundation; Fu Shengqi, Chinese dissident and Laogai survivor; Maranda Yen Shieh, Greater Wash. Network for Democracy in China; Peter Levy, Labelon/Noesting Co.; and Jeffrey Fiedler, Food and Allied Service Trades Dept. AFL-CIO.

The Three Faces of Chinese Power Sep 02 2021 “By learning more not only about China, but from China, America is more likely to sustain a constructive relationship with the rising China. Lampton insightfully provides us with the much-needed guidance.”—Zbigniew Brzezinski, Center for Strategic and International Studies “Professor Lampton's stimulating and well-researched book provides a comprehensive framework for intelligent thinking about the implications for the United States and the world of the rapid expansion of China's economic and military power. Serious students of world affairs and non-specialists concerned about the outlook for U.S.-China relations will all benefit from the historically-based insights and judgments that fill the pages of this thought-provoking volume.”—J. Stapleton Roy, former United States ambassador to China

Government Issued Opinion Feb 13 2020 Intelligence services, businesses and governments use a sinister methodology called an influence campaign to sway the core values of their own countries and others around the globe. This method is used by many different types of world governments (including the U.S.) and can pervade many different sectors of public life. Even seemingly powerful politicians are impacted by influence campaigns. While influence campaigns differ from political campaigns or corporate advertising, they share similar characteristics. Both influence behavior by manipulating beliefs to produce an outcome favorable to the campaign goal. This book explains the mechanisms of influence campaigns and how they affect policy making, often in surprising ways. Chapters detail examples of influence campaigns waged by various governments throughout the years and suggest how the public consciousness should deal with these strategies. As targets of these campaigns, citizens must understand how our leaders use them for their own benefit.

The 21st Century Mathematics Education in China Dec 13 2019 This book intends to provide a comprehensive introduction to the status of development of Chinese mathematics education in the 21st century. To this end, the book summarizes and presents the research and practices of Chinese mathematics education in the following aspects: (1) characteristics of Chinese school mathematics curriculum and textbooks, (2) Chinese ways and strategies of teaching

mathematics and the characteristics of mathematics classroom instruction in China, (3) Chinese instructional practices in developing (both gifted and underachieving) students' mathematical capabilities, (4) how professional development of mathematics teachers is promoted in China, including mathematics teachers' pre-service and in-service education, and how Chinese mathematics teachers design and implement teaching and research activities, and (5) how mathematics education is assessed and evaluated, including how to evaluate teachers' teaching and students' achievements. Relevant research in Chinese mathematics education involving methods of surveys, interviews, text analysis, etc., are reviewed and analyzed. Results of a number of video studies of Chinese mathematics classroom teaching and learning are also integrated into this book.

Food in China Nov 04 2021 This volume is a study of Chinese food from a cultural and historical perspective. Its focus is on traditional China before establishment of the People's Republic. It identifies and provides comprehensive information on a broad range of Chinese food plants and animals for general readers, as well as for specialists whose interests have led them to questions relating to the food of China. Readers will find discussions regarding origins, how things came to be, time and place of food-plant and animal domestication, the spread of plants and animals from and to China, and other historical questions regarding the foods used by the Chinese people. The book is written with Canton and the southeast as points of departure, but embraces all of China and is directed towards people unfamiliar with China.

A Feminist Reading of China's Digital Public Sphere Dec 17 2022 This book makes an original contribution to the field of feminist cultural studies through an analysis of the gender-politics axis established in China's digital public sphere. While a growing body of literature in contemporary feminist cultural studies has turned attention to the Chinese environment, scholarship remains limited in exploring the intersection of gender and politics in the context of Chinese digital cultures. This book addresses this timely topic. It will appeal to both scholars and students interested in exploring the complex, dynamic interplay between digital cultures, public expressions, as well as representations and perceptions of gender reflected in Chinese Internet users' everyday communicative practice from a feminist media studies perspective.

Chronology of Science Jun 30 2021 Chronology of Science contains approximately 2,000 cross-referenced entries, ranging from 50 to 150 words each, plus identifiers that categorize the entries into core areas (biology, chemistry, physics, marine science, space and astronomy, Earth science, and weather and climate). Also included are introductory and closing essays in each section, sidebars expanding upon important concepts in each time period, figure legends, appendixes directing

the reader to further information on specific topics, a bibliography, and an index. This is a helpful reference tool for students looking for basic information about specific scientific events. The entries inspire the reader to investigate the topic further. After reading sections of the book, the reader will have gained accurate information about scientific history, as well as a sense of how scientific discoveries build upon events of the past, and an understanding of the way scientific theories have changed over time.

Forced Labor in China Jan 14 2020

Receptor-Oriented Communication for Hui Muslims in China Apr 28 2021 There are many books that highlight the need and importance of mission toward unreached people. Unfortunately, few of them deal with the importance of understanding the real life of unreached people and how to analyze them. This book identifies conceptual issues for the development of receptor-oriented communication strategies among young, educated, urban Hui (YEU-Hui) Muslims in China's northwestern cities in order to achieve culturally relevant churches in those areas. It is written to help not only those who are interested in the unreached, but also those who are interested in Muslim evangelism, urban sociology, biblical exegesis, contextual church planting, communication, and mission strategy. Enoch Jinsik Kim utilizes a new approach—virtual community mission for planting offline churches—that integrates the use of local church-driven Internet community, traditional media, and offline task teams from a multi-ethnic local church. While the research focuses on the Chinese Muslim context, the identification of the young, urban, and educated as a strategic group for mission can be applied in other Muslim and non-Muslim contexts. This research is useful to cross-cultural communicators, church planters, and all those interested in interpersonal relationships.

Mesny's Chinese Miscellany Mar 16 2020 A text book of notes on China and the Chinese.

China Cloud Rising May 18 2020 In twenty years, China's expenditures for research and development will surpass those of the United States, a trend that epitomizes nationalistic ambitions to regain intellectual prestige for a country that had once invented paper and gunpowder. Tens of billions of dollars have been poured into a new technology superstructure as China seeks to transform its economy from a crippling reliance on manufacturing outsourcing. Cloud computing represents a dynamic foundation for the new superstructure that can foster the growth of a socio-capitalistic ecosystem, creating a new class of green exports in the form of highly sophisticated software and services. With Cloud computing, China is seeking to establish a new Silk Road, where its cultural products will once again change the world.

Reviving Ancient Chinese Mathematics Oct 15 2022 Twentieth-century China has been caught between a desire to increase its wealth and power in line with other

advanced nations, which, by implication, means copying their institutions, practices and values, whilst simultaneously seeking to preserve China's independence and historically formed identity. Over time, Chinese philosophers, writers, artists and politicians have all sought to reconcile these goals and this book shows how this search for a Chinese way penetrated even the most central, least contested area of modernity: science. *Reviving Ancient Chinese Mathematics* is a study of the life of one of modern China's most admired scientific figures, the mathematician Wu Wen-Tsun. Negotiating the conflict between progress and tradition, he found a path that not only ensured his political and personal survival, but which also brought him renown as a mathematician of international status who claimed that he stood outside the dominant western tradition of mathematics. Wu Wen-Tsun's story highlights crucial developments and contradictions in twentieth-century China, the significance of which extends far beyond the field of mathematics. On one hand lies the appeal of radical scientific modernity, "mechanisation" in all its forms, and competitiveness within the international scientific community. On the other is an anxiety to preserve national traditions and make them part of the modernisation project. Moreover, Wu's intellectual development also reflects the complex relationship between science and Maoist ideology, because his turn to history was powered by his internalisation of certain aspects of Maoist ideology, including its utilitarian philosophy of science. This book traces how Wu managed to combine political success and international scientific eminence, a story that has wider implications for a new century of increasing Chinese activity in the sciences. As such, it will be of great interest to students and scholars of Chinese history, the history of science and the history and philosophy of mathematics.

Industrializing Innovation-the Next Revolution Nov 11 2019 Over the past 25 years, the field of innovation, entrepreneurship and commercialization has reached a critical mass and maturity. It is not only possible but also essential to scale it so that an immense amount of untapped human innovative potential can be unleashed for the benefit of our people. Further, R&D centers and existing entrepreneurial ecosystems can be made more impactful. Firstly, this book succinctly identifies the entire field of innovation into one comprehensive and meaningful framework to help understand its evolution, incremental growth, super acceleration, and exponential explosion that has resulted in an innovation log jam. Secondly, it maps out common characteristics and approaches that make innovation, venture capital and investments into startups succeed much better. And, last, but not the least, it outlines measures to commercialize them in a massive way and "industrialize" innovation going forward including creating next generation 'Innovation Hubs'.

The Pulse of China's Grand Strategy Mar 08 2022 This book identifies and assesses the grand strategy of Chinese foreign policy following a flurry of diplomatic and investment activities in recent years. Through its adept application

of the concept of grand strategy, it examines a series of questions concerning China's objectives, targets, theaters, operations, coordination and purpose (teleology). By answering these questions, the book uncovers the deeper motivations behind China's diplomatic policy, revealing the 'pulse' of China's grand strategy and its implications more broadly to the structure of the international system. Additionally, it offers an evaluation of the external influence exerted by the United States as the incumbent hegemonic power, presenting both the probable policy attitudes of the US and China's possible reactions and responses. Through these discussions and evaluations, it ultimately reveals that China's motivations are deeply rooted both in its political past and in the interests of its ruling communist party, whose determination is the main source of China's current and future successes in ascending past any other nation. Offering an in-depth exploration of China's grand strategy this book will be of great value to students and scholars of Chinese politics, international relations, and diplomacy.

China, Inc. Apr 16 2020 The updated edition of journalist Ted C. Fishman's bestselling explanation of how China is rapidly becoming a global industrial superpower and how the American economy is challenged by this new reality. China today is visible everywhere -- in the news, in the economic pressures battering the globe, in our workplaces, and in every trip to the store. Provocative, timely, and essential -- and updated with new statistics and information -- this dramatic account of China's growing dominance as an industrial superpower by journalist Ted C. Fishman explains how the profound shift in the world economic order has occurred -- and why it already affects us all. How has an enormous country once hobbled by poverty and Communist ideology come to be the supercharged center of global capitalism? What does it mean that China now grows three times faster than the United States? Why do nearly all of the world's biggest companies have large operations in China? What does the corporate march into China mean for workers left behind in America, Europe, and the rest of the world? Meanwhile, what makes China's emerging corporations so dangerously competitive? What will happen when China manufactures nearly everything -- computers, cars, jumbo jets, and pharmaceuticals -- that the United States and Europe can, at perhaps half the cost? How do these developments reach around the world and straight into all of our lives? These are ground-shaking questions, and *China, Inc.* provides answers. Veteran journalist Ted C. Fishman shows how China will force all of us to make big changes in how we think about ourselves as consumers, workers, citizens, and even as parents. The result is a richly engaging work of penetrating, up-to-the-minute reportage and brilliant analysis that will forever change how readers think about America's future.

Chinese Agriculture in the 1930s Mar 28 2021 This edited volume analyzes land utilization data from farm surveys taken in China between 1929 and 1933. This data, which was the foundation for John Lossing Buck's seminal work *Land*

Utilization in China (1937), was thought lost to history until rediscovered in 2000. The book presents the first modern analyses of agricultural economics in Republican China using Buck's micro-data, covering important topics such as nutritional poverty, tenancy issues, land productivity, surplus labor, workers' incomes, credit supply, and regional differences. Through using modern analytical methods, this book presents a more accurate picture of the agricultural economy in the Republican Era and will be of particular interest to agricultural economists, economic historians, and Chinese studies scholars.

Proceedings of the 2015 Chinese Intelligent Systems Conference Feb 19 2023 This book presents selected research papers from the 2015 Chinese Intelligent Systems Conference (CISC'15), held in Yangzhou, China. The topics covered include multi-agent systems, evolutionary computation, artificial intelligence, complex systems, computation intelligence and soft computing, intelligent control, advanced control technology, robotics and applications, intelligent information processing, iterative learning control, and machine learning. Engineers and researchers from academia, industry and the government can gain valuable insights into solutions combining ideas from multiple disciplines in the field of intelligent systems.

Proliferation of Weapons- and Dual-Use Technologies Jan 06 2022 This book explores and analyzes the rapid pace of technological evolution in diplomatic, information, military, and economic sectors, which has contributed to a dynamic international policy environment. Global political stability is greatly influenced by innovations originating from numerous sources, including university labs, the technology sector, and military research. Collectively, these innovations guide the movement of people, ideas, and technology that in turn affect the international balance of power. The objective of this volume is to develop new insights into how the proliferation of innovative ideas, low-cost weapons, and dual-use technologies impact the changing global security landscape. Innovative and dual-use technologies can be used for beneficial purposes or defensive purposes.

Alternatively they may be appropriated or employed for nefarious purposes by hostile military powers and non-state actors alike. Such actions can threaten global security and stability. As the complexity of technological innovations continues to

increase, existing control mechanisms such as international regulations and security arrangements may be insufficient to stem the tide of proliferation over time. As such, this works seeks to assess and present policy solutions to curtail the threat to global stability posed by the proliferation of weapons and dual-use technology.
