Digital Papyrology I Sep 04 2021 Since the very beginnings of the digital humanities, Papyrology has been in the vanguard of the application of information technologies to its own scientific purposes, for both theoretical and practical reasons (the strong awareness towards the problems of human memory and the material ways of preserving it; the need to work with a multifarious and overwhelming amount of different data). After more than thirty years of development, we have now at our disposal the most advanced tools to make papyrological studies more and more effective, and even to create a new conception of "papyrology" and a new model of "edition" of the ancient documents. At this turning point, it is important to build an epistemological framework including all the different expressions of Digital Papyrology, to trace a historical sketch setting the background of the contemporary tools, and to provide a clear overview of the current theoretical and technological trends, so that all the possibilities currently available can be exploited following uniform pathways. The volume represents an innovative attempt to deal with such topics, usually relegated into very quick and general treatments within journal articles or papyrological handbooks.

The Heritage Arena Dec 27 2020 In Europe a number of production and communication strategies have long tried to establish local products as resources for local development. At the foot of the Alps, this scenario appears in all its contradictions, especially in relation to cheese production. The Heritage Arena focuses on the saga of Strachitunt, a cheese that has been designated an EU Protected Designation of Origin after years of negotiation and competition involving cheese-makers, merchants, and Slow Food activists. The book explores how the reinvention of cheese as a form of heritage is an ongoing and dynamic process rife with conflict and drama.

Archeologia e Calcolatori, 30, 2019 Aug 03 2021 Il volume 30 di «Archeologia e Calcolatori» si apre con un inserto speciale, dedicato al trentennale della rivista. Alle introduzioni di F. Djindjian e di P. Moscati, che delineano un quadro dell'informatica archeologica nel suo divenire, seguono gli articoli dei membri del Comitato di Redazione, a testimoniare l'attività di ricerca e di sperimentazione che ha caratterizzato il cammino editoriale della rivista, e il contributo di una giovane laureata dell'Università Bocconi, che ha lavorato a stretto contatto con il team di «Archeologia e Calcolatori». Nella parte centrale sono pubblicati gli articoli proposti annualmente dagli autori. Ne emerge un quadro che rappresenta gli aspetti applicativi più qualificanti dell'informatica archeologica (le banche dati, i GIS, le analisi statistiche, i sistemi multimediali), ma che guarda oggi con sempre maggiore interesse agli strumenti di visualizzazione scientifica e di comunicazione delle conoscenze. Il volume si chiude con gli Atti del XII Workshop ArcheoFOSS (Free, Libre and Open Source Software e Open Format nei processi di ricerca archeologica), un'iniziativa lodevole, nata nel 2006, cui si è più volte dato spazio nelle pagine della rivista.

Il Convegno si è tenuto a Roma presso il Museo Nazionale Romano – Palazzo Massimo alle Terme, nel maggio 2013. Due anni dopo la precedente edizione, la Soprintendenza Speciale per i Beni Archeologici di Roma (SSBAR) ha potuto presentare i recenti progressi del Progetto SITAR (Sistema Informativo Archeologico di Roma) e dei sistemi informativi sviluppati come parte di questo progetto. Più di trenta articoli, suddivisi in sette sezioni principali (1. Digital Cultural Heritage; 2. La diffusione del modello SITAR; 3. ICT e rete GARR-X; 4. Open Data; 5. Ricerca e smart innovation; 5. Ricerca e smart innovation; 6. Le banche dati della SSBAR e il SITAR; 7. Il SITAR nel dettaglio: casi applicativi) sono il segnale che la strada verso gli sviluppi di nuovi approcci nella conservazione, gestione e promozione del Patrimonio Culturale consistono in particolare nella condivisione della conoscenza archeologica e nella promozione delle relazioni internazionali tra enti pubblici, ricercatori e professionisti del settore. Particolare attenzione è inoltre stata posta sulla necessità di dare piena accessibilità alle informazioni, mettendole al servizio della conservazione, promozione e fruizione del patrimonio culturale, in stretta cooperazione con le istituzioni accademiche e di ricerca.

PHP 7 Solutions Dec 19 2022 Make your websites more dynamic by adding a feedback form, creating a private area where members can upload images that are automatically resized, or perhaps storing all your content in a database. David Powers has updated his definitive book to incorporate the latest techniques and changes to PHP, including the arrival of PHP 7. New features include the spaceship and null coalesce operators, generators, using array shorthand syntax for list(), array dereferencing, and array unpacking with the splat operator. The problem is, you're not a programmer and the thought of writing code sends a chill up your spine. Or maybe you've dabbled a bit in PHP and MySQL, but you can't get past baby steps. If this describes you, then you've just found the right book. PHP and the MySQL database are deservedly the most popular combination for creating dynamic websites. They're free, easy to use, and provided by many web hosting companies in their standard packages. This book also covers MariaDB, a seamless replacement for MySQL that has been adopted on many web servers. Unfortunately, most PHP books either expect you to be an expert already or force you to go through endless exercises of little practical value. In contrast, this book gives you real value right away through a series of practical examples that you can incorporate directly into your sites, optimizing performance and adding functionality such as file uploading, email feedback forms, image galleries, content management systems, and much more. Each solution is created with not only functionality in mind, but also visual design. But this book doesn't just provide a collection of ready-made scripts: each PHP solution builds on what's gone before, teaching you the basics of PHP and database design quickly and painlessly. By the end of the book, you'll have the confidence to start writing your own scripts or—if you prefer to leave that task to others—to adapt existing scripts to your own requirements. Right from the start, you're shown how easy it is to protect your sites by adopting secure coding practices. What You Will Learn Design and build dynamic PHP-based web sites and applications Get started right away through practical examples that you can reuse Incorporate PHP 7 elements including new ways of handling arrays Work with the latest PHP 7 techniques, innovations, and best practices Who This Book Is For Readers should have at least some prior exposure to web development using PHP.
