The Diver Medical Technician is responsible for the care and treatment of injured divers from every walk of life. From the recreational diver, to the elite deep saturation commercial divers, to the military special operations divers, and everything in between. Diver Medical Technician—Care of the Injured Diver, addresses the knowledge and skills required for the DMT to care for the vast variety of injuries that can befall anyone working or playing in a subaquatic environment. Beyond the injuries sustained due to operating in a dysbaric environment, the Diver Medical Technician must care for numerous non-diving related injuries, injuries that occur in the

diving workplace. This is the off-shore commercial environment, the public safety environment, and the field of military operations. These divers are not only exposed to the physics of the undersea world, but also the injury potential of the industrial workplace. In many cases the Diver Medical Technician is the only healthcare professional available with the skills and knowledge to save the life of the injured diver. This text addresses those skills and the knowledge base required to treat those injured in the diving and off-shore environment. SCUBA is a fun, relaxing, educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that has risks. SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to take the time to properly prepare and get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to drop weights, support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise, but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence, enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe Ice diving is one of the most technical kinds of diving--incorporating both overhead and confined space risks. The lack of proper training can have disastrous results. Ice Diving Operations is

written for public safety divers, decision makers, EMS, sport divers, and instructors, and fills the void in education for each level. The extensive information presented on hypothermia, universal safety procedures and much more, make this book invaluable even for non-ice diving operations. Ice Diving Operations is designed to be used to create uniform procedures and guidelines to meet NFPA and OSHA standards. From one of the world's most renowned cave divers, a firsthand account of exploring the earth's final frontier: the hidden depths of our oceans and the sunken caves inside our planet More people have died exploring underwater caves than climbing Mount Everest, and we know more about deep space than we do about the depths of our oceans. From one of the top cave divers working today—and one of the very few women in her field—Into the Planet blends science, adventure, and memoir to bring readers face-to-face with the terror and beauty of earth's remaining unknowns and the extremes of human capability. Jill Heinerth—the first person in history to dive deep into an Antarctic iceberg and leader of a team that discovered the ancient watery remains of Mayan civilizations—has descended farther into the inner depths of our planet than any other woman. She takes us into the harrowing split-second decisions that determine whether a diver makes it back to safety, the prejudices that prevent women from pursuing careers underwater, and her endeavor to recover a fallen friend's body from the confines of a cave. But there's beauty beyond the danger of diving, and while Heinerth swims beneath our feet in the lifeblood of our planet, she works with biologists discovering new species, physicists tracking climate change, and hydrogeologists examining our finite freshwater reserves. Written with hair-raising intensity, Into the Planet is the first book to deliver an intimate account of cave diving, transporting readers deep into inner space, where fear must be reconciled and a mission's success balances between knowing one's limits and pushing the envelope of human endurance. This full-color, extensively illustrated revision of a highly respected dive manual includes the information necessary to learn open water diving. Timely discussion include ecology and scuba techniques, equipment and safety materials, women's diving issues and concerns, expanded CPR information, air sharing and hand signals. Ultimately, he reveals how to break ranks with a rankings industry that misleads its consumers, undermines academic values, and perpetuates social inequality. \* Captures life in National Service (NS) which is the shared experience of every Singaporean man\* Looks at what it takes to be a naval diver and officer\* Author who is half American, shares his "adventure" in learning Singlish (Colloquial Singaporean English) and dialects\* Follows on the popularity of a Singaporean movie Ah Boys to Men 3 on life in the Navy \* Author will be having an event at Princeton in August / September 2017 This guide was developed by a PADI Master Instructor for use in training police divers for the Washington State Criminal Justice Training Commission. A PADI Distinctive Specialty Certification was authorized for students completing the course and a Specialty Instructor's Certification can be obtained from PADI using the Instructor's Certification Guide available from the California Investigative Academy. This course and the Guide was designed to be used in conjunction with the Underwater Crime Scene Investigation textbook, which was the first book of its kind to provide comprehensive training open water course instruction. The companion textbook has also been used by law enforcement divers throughout the U.S. and the world. The Instructor's Guide book

provides detailed information on course standards, requirements & prerequisites, equipment requirements, certification requirements, course schedule, academic modules, open water training modules, outlines, written test & the entire text of the course textbook "Underwater Crime Scene Investigation" by Eric Tackett. Instructions and assistance are available separately for PADI Instructors wishing to obtain a Distinctive Specialty Instructor's rating in underwater crime scene investigation. With this rating, a qualified PADI instructor can certify students in this specialty. This book enables organizations in both the private and public sectors to develop and execute efficient and effective business partnerships. Detailed requirements and market potentials are developed which would help entice the private sector to use its own resources to develop products and services without delay and at minimal cost to taxpayers. This is a 'must read' for anyone interested in doing business with the government as well as government leaders who are being forced to trim budgets and show genuine value in their agencies. The beautiful locales, exotic plant and sea life, and relaxing environs of dive locations are even more peaceful when you are armed with the expertise and skill to stay safe in any situation. 'Breathhtakingly researched, brilliantly executed' Wilbur Smith A STRUGGLE FOR REDEMPTION. A RACE AGAINST TIME A decades old submarine submerged in a cavern in the depths of jungle. A team of criminals hell-bent on unleashing the treasures it hides. And disgraced explorer, Rob Nash, the only person who can stop them. Set on a dangerous collision course in unforgiving territory, Nash finds himself in a race against time, whilst battling his own demons. Can he forgive himself for the wrongs of his past - and survive the perils that lie below the surface? A high-octane, fast-paced novel from a new voice in adventure writing and the winner of a Wilbur Smith Adventure Writing Prize. For fans of Clive Cussler. 'This has it all - exotic locations, a riveting plot, and heart-pounding suspense from beginning to end. An outstanding thriller not to be missed' Dirk Cussler 'Terrific entertainment' The Times THE NEW YORK TIMES BESTSELLER "A mesmerizing new historical novel" (O, The Oprah Magazine) from Lisa See, the bestselling author of The Tea Girl of Hummingbird Lane, about female friendship and devastating family secrets on a small Korean island. Mi-ja and Young-sook, two girls living on the Korean island of Jeju, are best friends who come from very different backgrounds. When they are old enough, they begin working in the sea with their village's all-female diving collective, led by Young-sook's mother. As the girls take up their positions as baby divers, they know they are beginning a life of excitement and responsibility—but also danger. Despite their love for each other, Mi-ja and Young-sook find it impossible to ignore their differences. The Island of Sea Women takes place over many decades, beginning during a period of Japanese colonialism in the 1930s and 1940s, followed by World War II, the Korean War, through the era of cell phones and wet suits for the women divers.

Throughout this time, the residents of Jeju find themselves caught between warring empires. Mi-ja is the daughter of a Japanese collaborator. Young-sook was born into a long line of haenyeo and will inherit her mother's position leading the divers in their village. Little do the two friends know that forces outside their control will push their friendship to the breaking point. "This vivid...thoughtful and empathetic" novel (The New York Times Book Review) illuminates a world turned upside down, one where the women are in charge and the men take care of the children. "A wonderful ode to a truly singular group of women" (Publishers Weekly), The Island of Sea Women is a "beautiful story...about the endurance of friendship when it's pushed to its limits, and you...will love it" (Cosmopolitan). The first book of its kind to provide comprehensive training open water course instruction, this work is the official course text for a PADI approved Distinctive Specialty course. The text has also been used by law enforcement divers throughout the U.S. and the world. The book provides detailed information on organizing, training and specialized equipment, as well as establishing and protecting crime scene boundaries, underwater navigation, search patterns, light salvage technique, locating, preserving and processing evidence recovered from underwater. Guidelines are provided in processing boats, planes and submerged autos, underwater crime scene sketches, photography and more. A modern stress inoculation text book. Addresses the issues of SCUBA diver deaths and near misses. Reviews the history of accidents, diver stress, behavior, medical considerations, fitness, and the concept of stress inoculation. A must read for divers and instructors interested in reducing the morbidity and mortality of diving. The first Luanne Fogarty mystery, full of swamp danger and diving know-how. The 6th Edition of the Commercial Diver Training Manual represents an almost total rewrite. Where previous editions were designed to be utilized in conjunction either with the NOAA Diving Manual or the U.S. Navy Diving Manual, the 6th Edition has been written as a stand-alone work that covers history, physics, physiology, diving medicine, and first aid in addition to those chapters devoted to diving technique, diving equipment, and working underwater. This manual is presented with the understanding that fully qualified instructors experienced in underwater work will provide any further explanation required by the reader. At the same time, the intent was to provide a manual to enhance both the theoretical and the practical training of the diver, with a view to providing graduates that are more knowledgeable and well informed in their chosen trade, performing their assigned tasks in a safe and productive manner. To that end, this manual strives to present the following:

- Diving physics in a clear, concise manner
- The latest theory and procedure in physiology and diving medicine
- The latest in practice and procedure both inland and offshore
- The most commonly used diving and support equipment accepted for use in today's industry

While it is understood it would require several volumes to address every conceivable task performed on every type of underwater project employing commercial divers, this manual endeavors to cover the most commonly performed tasks and the most common underwater operations. By presenting these more common projects and tasks in detail, it is hoped the reader will be better informed and better prepared for a career underwater. In addition, by further illustrating both technique and safety concerns with case studies and personal accounts from the author's career, the manual shows the reader these are more than just words being presented: suggestions help the

reader become more proficient and safety guidelines keep the reader from injury or death. The problem this research addresses is that the fire service continues to experience a number of injuries and line of duty deaths as a result of accidents during underwater operations. The Wilmette Fire Department experienced a near miss in 2004 of a diver during an ice dive training evolution. Written for instructors, dive team captains, surface teams, and underwater personnel alike, this book offers definitive information on procedures for safe operations, proper methods of training, and how to make appropriate purchasing decisions. Various techniques and types of equipment are discussed and assessed. Included also are chapters on methods of search in black water, swift water, and contaminated water, as well as techniques for evidence recovery.
