**Storage and Handling-** Royal trim and moulding should be stored off the ground, fully supported on a flat surface.- Never place Royal trim and mouldings directly on blacktop or other surfaces that can develop excessive heat.- Store in a well ventilated area.- Keep under shipping shroud, white side up during warehousing.- For products with protective film, remove film directly after installation.- Protective film should not be left exposed more than 90 days.

**Safety-** Wear safety glasses for all cutting and nailing operations.- Follow standard safety practices for using power tools, ladders, etc.- Cut and mill in a well-ventilated area.

**Structural Integrity-** Royal trim and mouldings are not to be used as structural products in load bearing applications. PVC boards must always be supported by wood or other structural materials.

**Managing the expansion and contraction-** PVC products expand and contract through temperature changes. This movement must be taken in consideration when working with the products.- The amount of movement of a board is in relation to its length. Therefore, the longer the board, the more movement is likely.- Window trim is typically assembled prior to installation on the wall and are small enough not to need additional expansion joints, etc.
