Hands-On Ensemble Learning with R Jun 01 2021 Explore powerful R packages to create predictive models using ensemble methods Key Features Implement machine learning algorithms to build ensemble-efficient models Explore powerful R packages to create predictive models using ensemble methods Learn to build ensemble models on large datasets using a practical approach Book Description Ensemble techniques are used for combining two or more similar or dissimilar machine learning algorithms to create a stronger model. Such a model delivers superior prediction power and can give your datasets a boost in accuracy. Hands-On Ensemble Learning with R begins with the important statistical resampling methods. You will then walk through the central trilogy of ensemble techniques – bagging, random forest, and boosting – then you'll learn how they can be used to provide greater accuracy on large datasets using popular R packages. You will learn how to combine model predictions using different machine learning algorithms to build ensemble models. In addition to this, you will explore how to improve the performance of your ensemble models. By the end of this book, you will have learned how machine learning algorithms can be combined to reduce common problems and build simple efficient ensemble models with the help of real-world examples. What you will learn Carry out an essential review of re-sampling methods, bootstrap, and jackknife Explore the key ensemble methods: bagging, random forests, and boosting Use multiple algorithms to make strong predictive models Enjoy a comprehensive treatment of boosting methods Supplement methods with statistical tests, such as ROC Walk through data structures in classification, regression, survival, and time series data Use the supplied R code to implement ensemble methods Learn stacking method to combine

heterogeneous machine learning models Who this book is for This book is for you if you are a data scientist or machine learning developer who wants to implement machine learning techniques by building ensemble models with the power of R. You will learn how to combine different machine learning algorithms to perform efficient data processing. Basic knowledge of machine learning techniques and programming knowledge of R would be an added advantage.

Neuropathic Pain Dec 15 2019 Neuropathic pain is one of the most common, most debilitating, most costly, and most difficult to treat categories of chronic pain conditions that are characterized by a lesion or disease of the somatosensory nervous system. Managing neuropathic pain is challenging and requires skillful assessment and comprehensive and integrated treatment strategies that are mechanism-guided, evidence-based, and individualized. However, these critical and integral elements are very fragmented in the current literature. The mechanistic understanding of neuropathic pain is typically found in basic research articles. Clinical research evidence is presented in forms of clinical trials with emphasis on minimizing biases such as those from patient selection and assessment. Individualized considerations for each patient are usually presented in case reports and problem-based learning discussions. This book overcomes these barriers and integrates all the critical elements around individual patient care into a coherent management strategy that is practical and applicable to daily clinical practice. Rather than compiling what have been published in the literature, this work emphasizes on identifying and highlighting the key points or findings that guide decision-making in clinical practice. It integrates the key points around a typical case scenario that not only represents the core of the diagnostic and therapeutic processes but also allows introduction and differentiation of painful conditions that bare similarities with the case in hand. The overarching goal is to improve clinical outcomes through better understanding of the mechanisms, more accurate diagnosis, and wiser and more comprehensive treatment strategies.

Nines by the Numbers Sep 16 2022 Johann Casper Neun (d.1788) immigrated in 1737 on a ship from Amsterdam to Philadelphia, and settled in Philadelphia County, Pennsylvania. He had apparently immigrated in 1727, then returned to Europe, and immigrated for settlement in 1737. Descendants and relatives (chiefly spelling the surname Nine) lived in Pennsylvania, Virginia, West Virginia, Indiana, Illinois, Minnesota, Tennessee, Texas, California and elsewhere. Includes a chapter on

"unconnected Nine lines."

Stump Nov 25 2020 A newcomer has arrived in a small Welsh seaside town - a one-armed Liverpoolian. Seeking to rebuild his life, if not his body, he is attempting to lead a life here unlike any he's lived before: a normal one - shopping, gardening, signing on, visiting friends, all the usual diurnal activities. Over a hundred miles to the north, however, two men in shellsuits are leaving Liverpool, heading south in a rickety old car. They have been sent by their gang-boss to wreak terrible, violent revenge, but have only a rough idea of their quarry: a one-armed man, maybe living somewhere in west Wales, in a small town by the sea.

Developments in Agricultural and Industrial Ergonomics Aug 23 2020 This book is a compilation of papers presented in the International Ergonomics Conference, HWWE-2007 held at Central Institute of Agricultural Engineering, Bhopal during December 10-12, 2007. The proceedings of HWWE 2007 titled "Developments in Agricultural and Industrial Ergonomics" has been brought out in two volumes, Vol. 1 (General Studies) and Vol-2 (Women at Work). This volume contains section on Anthropometry and Work Place Design, Work and Sport Physiology, Physical Environment, Cognitive/Design Ergonomics, Ergonomics in Agriculture, Ergonomics in Industry and Occupational Health and Safety.

The Mystery of the Tree Stump Ghost Aug 03 2021 A ghost story has the Whiskers Sisters spooked. The tale says a spirit haunts the forest's old tree stump. But when Tim the fox disappears near the stump, it's the Whiskers Sisters to the rescue! Maya, Mia, and May set out to find their friend. And below the stump, a kooky surprise is waiting for them. Will their adventure have a fairy-tale ending?

The Grump on the Stump Jul 02 2021 A grumpy girl overcomes her own behaviors and sees herself for who she is, a wonderful young girl.

Phantom Pain Apr 30 2021 Phantom pain is an intriguing mystery that has captured the imagination of health care providers and the public alike. How is it possible to feel pain in a limb or some other body part that has been surgically removed? Phantom pain develops among people who have lost a limb or a breast or have had internal organs removed. It also occurs in people with totally transected spinal cords. Unfortunately, phantom pain is a medical night mare. Many of the people reporting phantom pain make disproportionately heavy use of the medical system because their severe pains are usually not treated successfully. The effect on quality of life can be devastating. Phantom pain has been reported at least since 1545 (Weir Mitchell as related by Nathanson, 1988) and/ or experienced by such diverse people as Admiral Lord Nelson and Ambroise Pare (Melzack & Wall, 1982; Davis, 1993). The folklore surrounding phantom pain is fascinating and mirrors the concepts about how our bodies work that are in vogue at any particular time. Most of the stories relate to phantom limbs and date from the mid-1800s. The typical story goes like this: A man who had his leg amputated complained about terrible crawling, twitching feelings in his leg. His friends found out where the leg was buried, dug it up, and found maggots eating it. They burned it, and the pain stopped. Another man complained of a swollen feeling with frequent stinging or biting pains.
