aug 17 2021 this
is how applications
communicate with
operating system it
can only
communicate with
the operating
system through the
api or application
program interface
the api is a set of

common functions
that the application
calls upon to get
the operating
system to do what it
wants the operating
system never
communicates
directly with the
web a system
software acts as an
interface between
the system and the
application
software the
various operating
systems are the
best example as it
allows the user to
download and work
with various
applications on
their device on the
other hand
application
software is
designed for users
the applications can
be added to system
software web sep
